### Chapter 2.10. Lower Colorado River Watershed Management Unit Assessment

#### 2.10.1. Introduction

The Lower Colorado River Watershed Management Unit includes all streams located in the U.S.G.S. Hydrological Units (HUCs) listed in Table 2.10-1. Some of the major streams are the Santa Clara River, Virgin River, East Fork of the Virgin River, North Fork of the Virgin River, North Creek, Kanab Creek and Laverken Creek.

Hydrological Unit Code	Hydrological Unit Name
15010003	Kanab
15010008	Upper Virgin
15010009	Fort Pierce Wash
15010010	Lower Virgin

#### 2.10.2. Water Quality Assessment Results

Results of the 2006 Integrated Report were used to assess the waters. Data collected since the intensive survey was included in the assessment. Water chemistry and field data are compared against State standards to do the assessment. In addition, benthic macroinvertebrate data were used to assess aquatic life beneficial use support under the narrative standard (Chapter 2.15).

Overall Beneficial Use Support

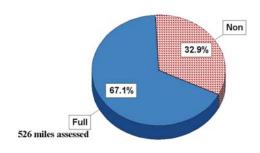

Figure 2.10-1 Overall Beneficial Use Support

#### 2.10.2.1 Overall Beneficial Use Support

Figure 2.10-2 is a map of the designated beneficial uses assigned to streams in this watershed management unit. An assessment of support for at least one beneficial use was made for 526.2 stream miles. Of those assessed, 353.3 miles (67.1%) were assessed as

fully supporting all the beneficial uses assessed and 172.9 (32.9%) were assessed as not supporting at least one designated beneficial use. The overall beneficial use support is shown in Figure 2.10-1.

#### 2.10.2.2 Beneficial Use Assessment By Categories

The beneficial uses assigned to streams in unit are illustrated in Figure 2.10-2. The number of stream miles assessed by categories is listed in Table 2.10-2. Figure 2.8-3 is a map of the beneficial use assessment results by categories.

Table 2.10-2 Stream Miles by Assessment Category – Lower Colorado Watershed Management Unit

Category	Category Definition	Stream Miles
1	All beneficial uses fully supported.	
2	Beneficial uses assessed are fully supported.	353.31
3A	No data or insufficient data to make an assessment.	86.05
3B	Lakes that are not supported for one cycle only.	
3C	Insufficient data to assess but an assessment plan is in place.	
4A	Approved TMDL	23.67
4B	Pollution control requirements are expected to result in full beneficial use support in near future.	
4C	Impaired by pollution, no TMDL required.	
5	Impaired by pollutant, TMDL required.	172.9

#### 2.10.2.3--Individual Beneficial Use Support

Individual beneficial use assessments are listed in Table 2.10-3. These include aquatic life use, agriculture and drinking water.

Table 2.10-3 Stream Miles by Assessment Category – Lower Colorado Watershed Management Unit

	Size	Size Size Fully Size Not		
	Assessed	Supporting	Supporting	Totals
Use				
Drinking Water	210.25	210.25		210.25

	Assessed	Supporting	Supporting	Totals
Use				
Agricultural		74.2%	25.8%	100.0%

#### 2.10.2.4--Total Waters Impaired by Various Causes

The causes of impairment are listed in Table 2.10-4. The causes of impairment are metals, temperature, total dissolved solids. The relative impact of these causes is shown in Figure 2.10-5.

#### 2.10.2.5--Total Waters Impaired by Various Sources

The number of stream miles impacted by sources are listed in Table 2.10-5. The major sources of impairment were agricultural activities, hydromodification, drought, natural sources and urban runoff as shown in Figure 2.10-6. The relative percent impairment by sources is illustrated in Figure 2.10-7.

#### 2.10.2.6 Impaired Assessment Units

Table 2.10-6 is a list of the impaired waters in the Lower Colorado Watershed Management Unit.
